

When providing measurements, please use millimeters for accuracy, and if you have multiple shapes to template, label them as 'Template 1,' 'Template 2,' and so on.

We will cut your materials precisely to the dimensions you provide, but please keep in mind that our tolerance is +/-1mm.

To ensure accuracy, measure in multiple places to verify consistent dimensions along the entire length. It's important to note that CutMy cannot be held responsible for any pieces that do not fit if they are cut to the dimensions you supply.

We recommend using silicone for sealing the splashbacks during installation, as it can conceal any minor size discrepancies. If your splashback ends up a few millimeters too small, the silicone will effectively hide the gap.
